

AIR – IPEDS Educator Webinar
March 17, 2019

**FUTURE PROSPECTS OF THE
CARNEGIE CLASSIFICATIONS
AND HIGHER EDUCATION
INSTITUTION PERFORMANCE
ASSESSMENT**

Victor M. H. Borden
Professor of Higher Education
Retiring Director, CCIHE

Overview

- The Carnegie Classifications[®] - A brief review
- The Carnegie Classifications and IPEDS
- Uses of the Carnegie Classifications
- The Future of the Carnegie Classifications
 - Consolidation of Legacy and Elective at ACE
 - The Social Mobility Classifications
 - Further future ruminations

PART 1 – THE CARNEGIE CLASSIFICATIONS®

Brief history, current structure, 2021 update

Carnegie Classifications – Original Purpose

- ...identify categories of colleges and universities that would be relatively homogeneous with respect to the functions of the institutions as well as with respect to characteristics of students and faculty members
- Shorthand for quickly characterizing an institution
- Government policy: system differentiation and resource allocation
- Help prospective students or staff members identify the pool of institutions they might wish to join
- Research uses: sampling, data analysis, or both

Evolving Structure – Past

- Clark Kerr Years – 1973, 1976
 - Thresholds for Doctoral/Research categories increased and other minor changes
- Ernie Boyer Years – 1987, 1994
 - Slight tinkering with thresholds; Tribal Colleges added
- Lee Schulman, Alex McCormick and Chun-Mei Zhao – 2000, 05, 10
 - Five year-cycle and associates subcategories established
 - Addition of five other inclusive classification and Community Engagement elective classification
 - Doctoral categories first reduced to two (intensive/extensive) then to the now existing three
 - Research activity index introduced

Evolving Structure – Past (cont.)

Five parallel classifications added in 2005

- What is taught, to whom, in what setting?
 - Undergraduate instructional program
 - Graduate instructional program
 - Enrollment profile
 - Undergraduate profile
 - Size & Setting

Evolving Structure – Recent Past and Present

- Moves to IU Center for Postsecondary Research for 2015 Update
 - Paul LeMahieu, Vic Borden and the IU Team
- 2015 Update
 - Associates subcategories restructure and special focus 2-year added
- 2018 Update
 - First in the three-year cycle;
 - Doctoral categories restructured from three research level categories to two research and one “doctoral/professional”

The 2021 Update

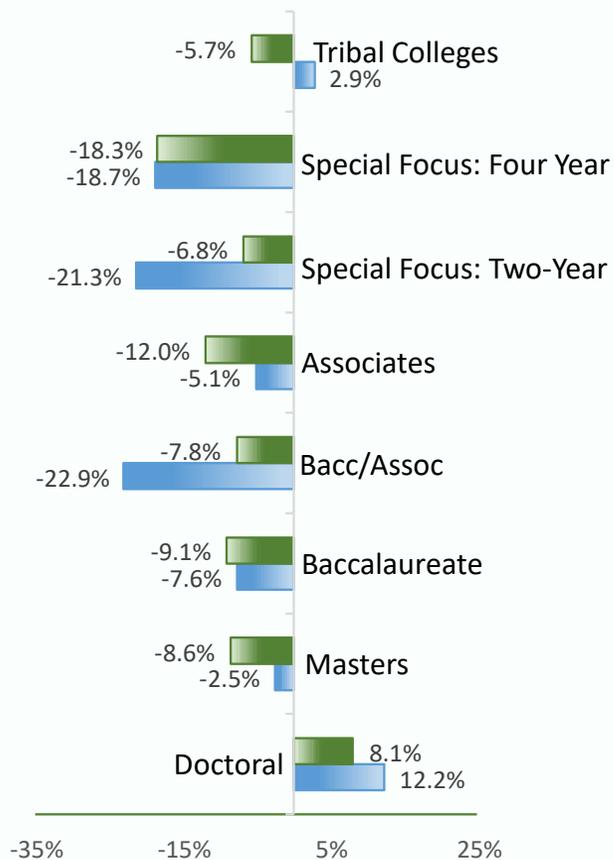

- Public Review Release – Mid-December
- Data Sources
 - 2019-20 IPEDS Completions
 - 2020 IPEDS Enrollment, Human Resources
 - FY2019 NSF/NIH GSS (Postgraduates and Non-Faculty PhD Research Staff)
 - FY2020 NSF HERD (Research Expenditures)
- Minor changes
 - Restoring Tribal Colleges & Universities label
 - Adding category for Special Focus Research Universities

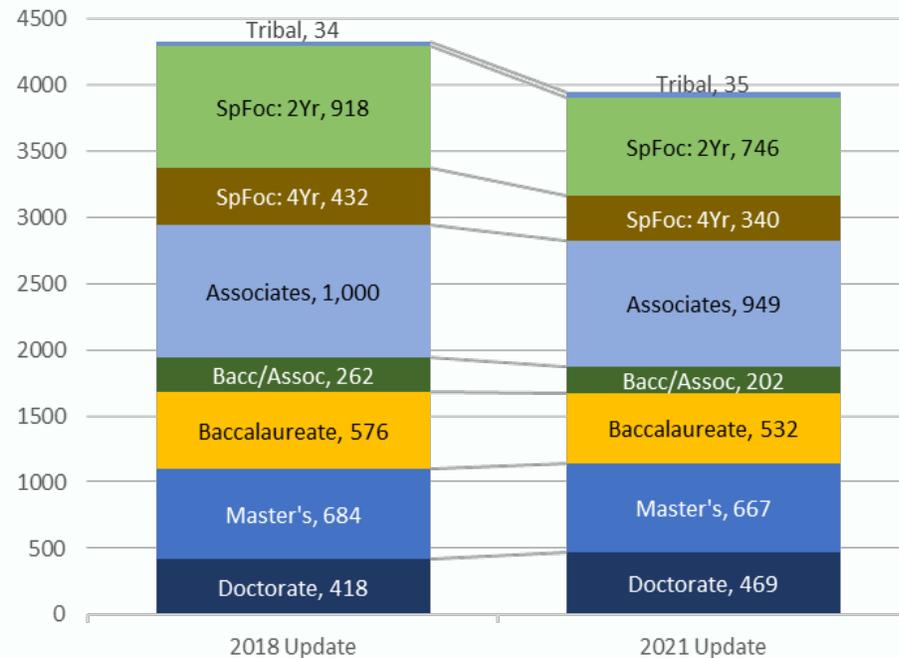

Distribution of Institutions and Enrollment

Percent Change in No. of Institutions and Total Enrollment, 2018 to 2021 Update

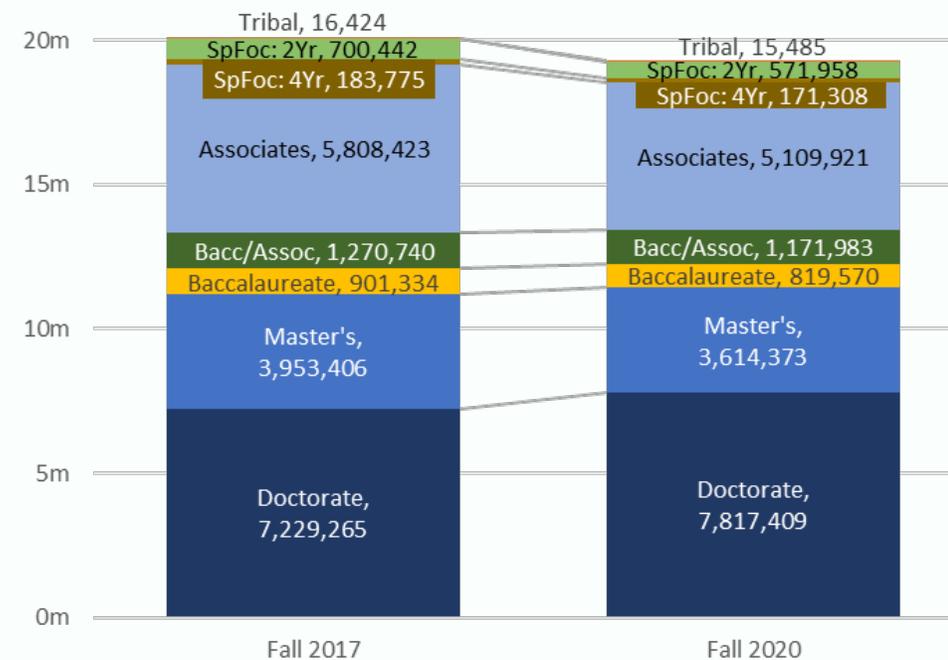

■ Total Enrollment ■ No. of Institutions

Number of Institutions

Total Enrollment

The Research Activity Index

- Introduced in 2005 as more nuanced approach
- Uses both raw and per capita indices
 - Research footprint (both raw and per capita)
 - S&E Research Expenditures
 - Non-S&E Research Expenditures
 - Research Staff: Post Docs and Non-Faculty PhD Researchers
 - Scholarship footprint (raw) – **research/scholarship** doctorates conferred in...
 - Social Sciences
 - Humanities
 - STEM
 - All other (professions, e.g., Business, Education, Health)

The Research Activity Index

- Seven measures

Measure	Source (2018 data year / 2021 data year)
Science & Engineering (S&E) Research Expenditures	NSF Higher Education Research & Development Survey (HERD) (FY17 / FY20)
Non-S&E Research Expenditures	
Postdoctorates and Non-Faculty PhD Trained Research Staff	NSF/NIH Survey of Graduate Students and Postdoctorates in Science and Engineering (GSS) (Fall 2016 / Fall 2019)
Research/Scholarship Doctorates Conferred in...	National Center for Education Statistics (ED-NCES) Integrated Postsecondary Education Data System (IPEDS) Completions Survey (AY 2016-17 / AY 2019-20)
Humanities	
Social Sciences	
Science, Technology, Engineering & Math (STEM)	
Other Disciplines/Professions	

Two Indices

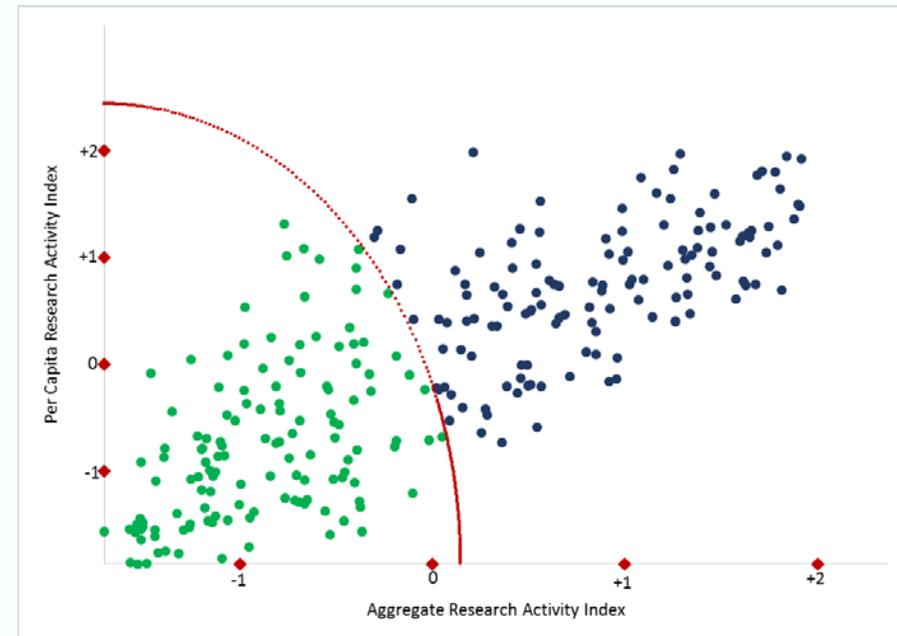

- Aggregate – all seven measures
- Per capita – the three research activity measures divided by full-time, ladder rank (full, assoc, asst profs) headcount

Methodology

- Measures converted to rankings
- PCA on rankings, separately for aggregate and per capita indices...
 - produces item weights
 - Index = Sum of weighted measures ($\sum w_i \times m_i$)
- Calculate distance to origin for each index pair $D = \sqrt{x^2 + y^2}$
- Convert to standard form
- Determine cutoff
 - Largest “gap” between points near median

Measure	Weight
S&E R&D Expenditures	0.899
Non-S&E R&D Expenditures	0.817
Research Staff	0.894
Doctorates: Humanities	0.839
Doctorates: Social Sciences	0.864
Doctorates: STEM	0.909
Doctorates: Other Fields	0.621
Measure	Weight
Per-capita S&E R&D Expenditures	0.935
Per-capita Non-S&E R&D Expenditures	0.619
Per-capita Research Staff	0.930

AIR Member Survey (2016)

- Respondents' suggestions on how to improve CCIHE
 - **Update the CCIHE**
 - Update more frequently
 - More institutional benchmarking tools
 - Readily accessible database with filters and statistical/graphic output
 - Classify for-profit institutions into different types
 - Include forward analyses
 - Use more national metrics to compare community colleges
 - **Other comments**
 - **Broaden awareness**
 - CCIHE
 - CCIHE web site
 - **Ranking**
 - CCIHE is not a ranking

Key Resource Awareness

- [Definitions/Methodology](#)
- [Download Page](#)

Definitions and Methods

The Classifications include any institution that conferred at least one degree in academic year 2019-20 as reported through the National Center for Education Statistics IPEDS. In addition, data were collected directly from military service institutions that do not currently participate in the IPEDS survey. Further information on the criteria for inclusion are available at the link, [IPEDS methodology](#).

Basic Classification Description

The Basic Classification is an update of the traditional classification framework developed by the Carnegie Commission on Higher Education in the early 1970s to support its research program. The Basic Classification was originally published for public use in 1973, and subsequently updated in 1976, 1987, 1994, 2000, 2005, 2010, 2015, 2018 and 2021. The 2021 update includes only minor changes. Specifically, the label "Tribal Colleges" has been changed back to "Tribal Colleges and Universities". In addition, there is a newly created category "Special Focus Research Institution", comprised of the special focus institutions that meet the criteria for being considered a "Research University" but confer degrees in a limited range of academic programs. Additionally, the special focus categories of "Engineering Schools" and "Other Technology-Related Schools" have been combined into a single category.

[See the Methodology](#)

Doctoral Universities

Includes institutions that awarded degrees that were awarded at least 30 p

Basic Classification Description

The Basic Classification is an update of the traditional classification framework developed by the Carnegie Commission on Higher Education in the early 1970s to support its research program. The Basic Classification was originally published for public use in 1973, and subsequently updated in 1976, 1987, 1994, 2000, 2005, 2010, 2015, 2018 and 2021. The 2021 update includes only minor changes. Specifically, the label "Tribal Colleges" has been changed back to "Tribal Colleges and Universities". In addition, there is a newly created category "Special Focus Research Institution", comprised of the special focus institutions that meet the criteria for being considered a "Research University" but confer degrees in a limited range of academic programs. Additionally, the special focus categories of "Engineering Schools" and "Other Technology-Related Schools" have been combined into a single category.

[See the Methodology](#)

Basic Classification Methodology

For a flowchart illustrating the logic of the six all-inclusive Classifications click [here](#) 

Doctoral Universities

Institutions were included in these categories if they awarded at least 20 research/scholarship doctorates in 2019-20, or awarded at least 30 professional practice doctorates across at least 2 programs. These categories were limited to institutions that were not identified as Tribal Colleges or Special Focus Institutions.

Level of Research Activity

Institutions that conferred at least 20 research/scholarship doctorates in 2019-20 and reported at least \$5 million in total research expenditures in FY20 were assigned to one of two categories based on a measure of research activity. The research activity index includes the following correlates of research activity: research & development (R&D) expenditures in science and engineering; R&D expenditures in non-S&E fields; S&E research staff (postdoctoral appointees and other non-faculty research staff with doctorates); doctoral conferrals in humanities, social science, STEM (science, technology, engineering, and mathematics) fields, and in other fields (e.g., business, education, public policy, social work). The mapping of doctoral degrees to these four disciplinary clusters is available in document in this [Excel file](#) . These data were statistically combined using principal components analysis to create two indices of research activity reflecting the total variation across these measures (based on the first principal component in each analysis).

One index represents the aggregate level of research activity, and the other captures per-capita research activity using the expenditure and staffing measures divided by the number of full-time faculty within the assistant, associate, and full professor ranks. The values on each index were then used to locate each institution on a two-dimensional graph. We calculated each institution's distance from a common reference point (the minima of each scale), and then used the results to assign institutions to one of two groups based on their distance from the reference point. Thus the aggregate and per-capita indices were considered equally,

Frequently used/Derived variables

- Institutions
- Total cost of attendance
- Student financial aid of full-time first-time degree or certificate-seeking undergraduate students
- Average net price for full-time, first-time degree/certificate-seeking undergraduate students, 2006-07 to current year
- Selectivity and admissions yield
- Fall enrollment/retention rates
 - Total, full- and part-time enrollment and fall FTE
 - Step 1: Select Year(s)
 - Fall 2015 Fall 2014 Fall 2013 Fall 2012 Fall 2011 Fall 2010 Fall 2009 Fall 2008
 - Fall 2007 Fall 2006 Fall 2005 Fall 2004 Fall 2003
 - Select from the List of Variables
 - Total enrollment
 - Full-time equivalent enrollment (Fall enrollment derivation)
 - Full-time enrollment
 - Part-time enrollment
 - Institution size category
- Undergraduate and graduate enrollment by full- and part-time status
- Percent of total enrollment by race/ethnicity
- Percent of undergraduate and graduate enrollment by race/ethnicity
 - Step 1: Select Year(s)
 - Fall 2015 Fall 2014 Fall 2013 Fall 2012 Fall 2011 Fall 2010 Fall 2009
 - Select from the List of Variables
 - Percent of undergraduate enrollment that are American Indian or Alaska Native

QUESTION PAUSE

AS NEEDED

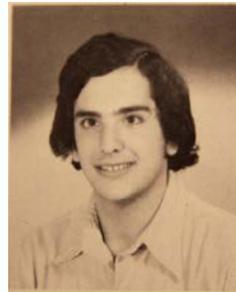

PART 3 – THE FUTURE OF CCIHE

Move to ACE, Social Mobility, Ruminations

victor borden

The Move to ACE

- Consolidating the original and expanded elective classifications
- Elective Classifications
 - [Community Engagement](#) – 2010; 2015; 2020; 2024
 - [Leadership for Public Purpose](#) (Doerr Institute for New Leaders, Rice University)
- 2023 50th anniversary: Social Mobility Classification
- 2024 Classification Update
- Listening to learn how to do more and do better

The Social Mobility Classification

- Classification v. Performance Measure
 - Performance measure – the “amount/extent” of social mobility
 - Brandon Cantwell [article](#) - They tell a simple story: Harvard’s bad, CUNY and Cal State are good. It’s not that straightforward
 - The social-mobility rankings encourage us to sidestep these hard questions and the uncomfortable, complex realities of our academic system by distilling everything down to a single rating. Rather than carrying on a conversation about which colleges are up and which are down, we need a more nuanced discourse that reflects sociological and political realities — not expedient narratives
 - Classification
 - What institutional and contextual factors are required to effectively compare
 - From Cantwell article
 - high-mobility institutions concentrated around the country’s largest and metropolitan regions
 - Colleges that enroll many low- and moderate-income learners tend to do well on social mobility

Further future ruminations

- Unpacking the “other” classifications
 - Graduation instructional program – R/S doc or not; program mix
 - Undergrad instructional program- program mix; coexistence
 - Enrollment profile – grad/undergrad mix
 - Undergraduate profile – course-load (ft/pt); selectivity; transfer-in
 - Size and Setting – Size and residential character
- Expansion of performance measures, properly contextualized for appropriate comparison
 - Social Mobility
 - Employability (graduate attributes)
 - Contributions to social justice

Wherefore R1?

- Other possible configurations
 - Dimensional configuration
 - Disciplinary– separate Social Sciences, Humanities, STEM
 - Separate size and density (per capita)
 - Will that just lead to multiple R1?
 - Comprehensive R1 v. Focused R1
 - Tried in 2000 (research extensive/research intensive)
 - Rejected by field
- Incorporate/Shift to bibliometric measures
 - Research impact via citations and other emerging measures
 - How good are the data (Clarivates, Scopus, Elsevier)
